

Develop The Web Application Using Node-RED

Team Leader : Priya dharshini G

Team Member 1:Muthu Priya dharshini k

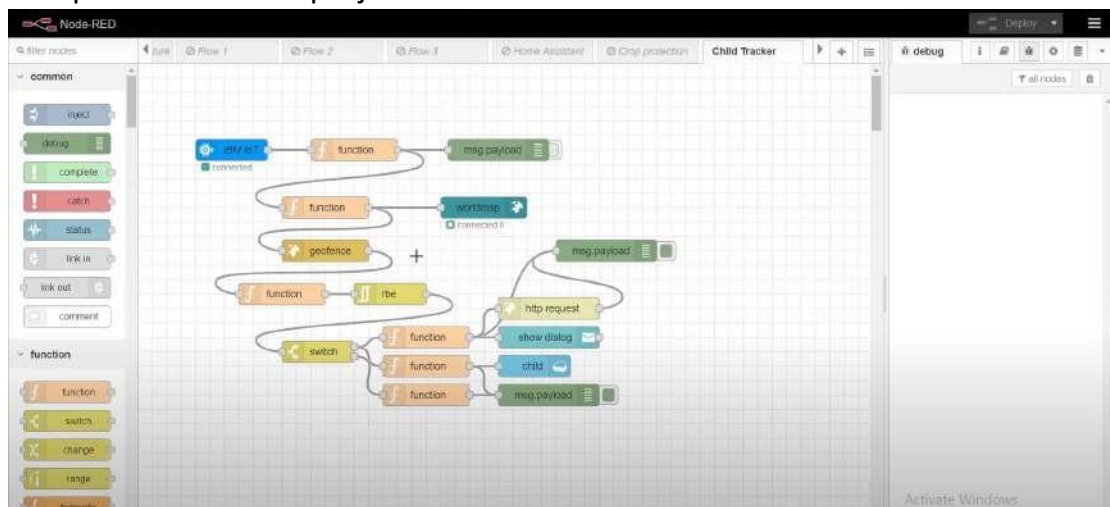

Team Member 2: Swathy c

Team Member 3: Sibi Arokya

TEAM Member 4 : Anto Sharlin Biju S

Steps :

1. Open a Node-RED project

2. Add code to get child location in python

```

import json
import wiotp.sdk.device
import time

myConfig = {
    "identity": {
        "orgId": "hj5fmy",
        "typeId": "NodeMCU",
        "deviceId": "12345"
    },
    "auth": {
        "token": "12345678"
    }
}

client = wiotp.sdk.device.DeviceClient(config=myConfig, logHandlers=None)
client.connect()

while True:
    name= "Smartbridge"
    #in area location

    latitude= 17.4225176
    longitude= 78.5458842

    #out area location

    #latitude= 17.4219272
    #longitude= 78.5488783
    myData={'name': name, 'lat':latitude,'lon':longitude}
    client.publishEvent(eventId="status", msgformat="json", data=myData, qos=0, onPublish=None)
    print("Data published to IBM IoT platform: ",myData)
    time.sleep(5)

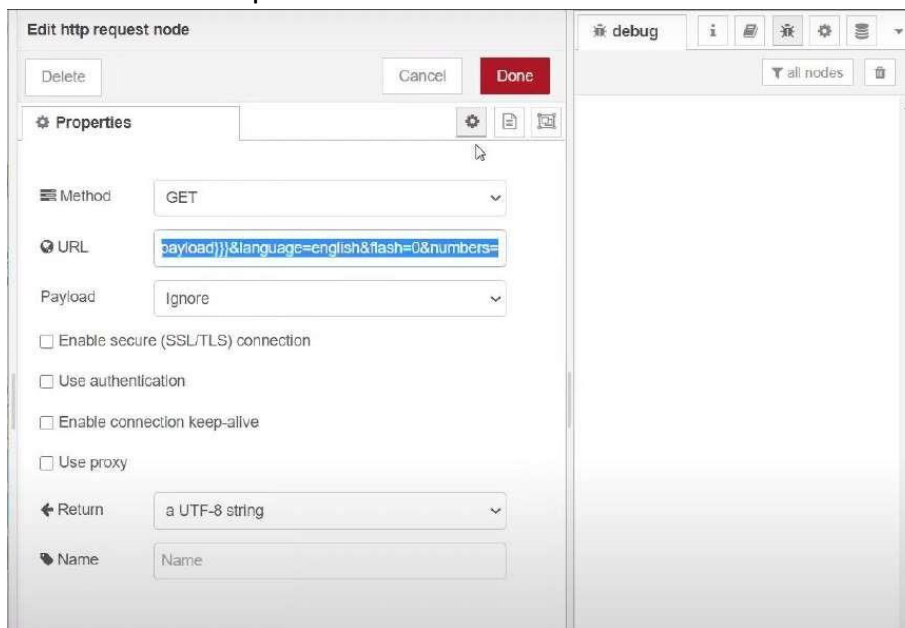

client.disconnect()

```

3. Create the GeoFence

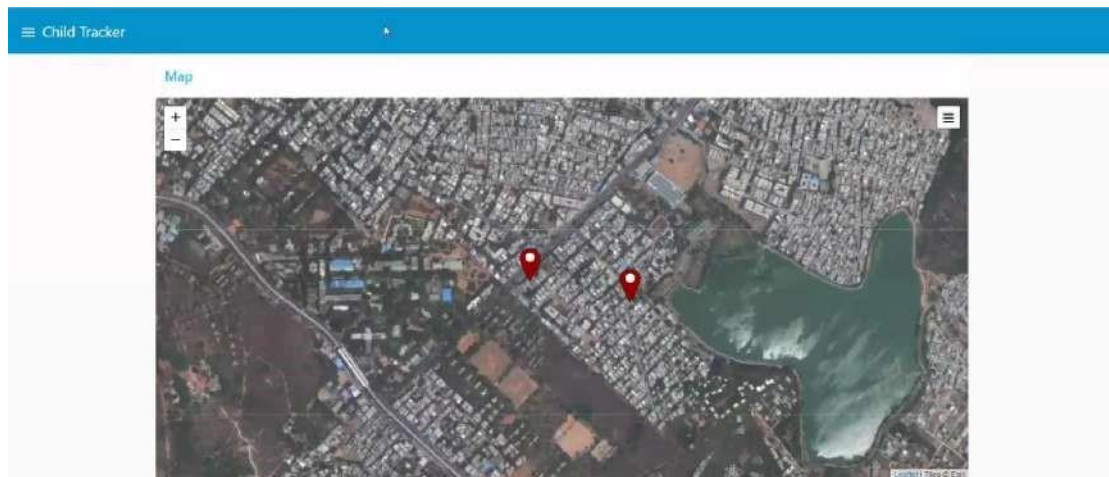

4. Edit the HTTP Request URL

5. Locate the child

6. Create the geofence node

Conclusion:

Developed the web application using Node-RED Successfully
